Import data from JSON file into app.js using `d3.json().then`

Collect the consultant name selection using `element.property('value')`

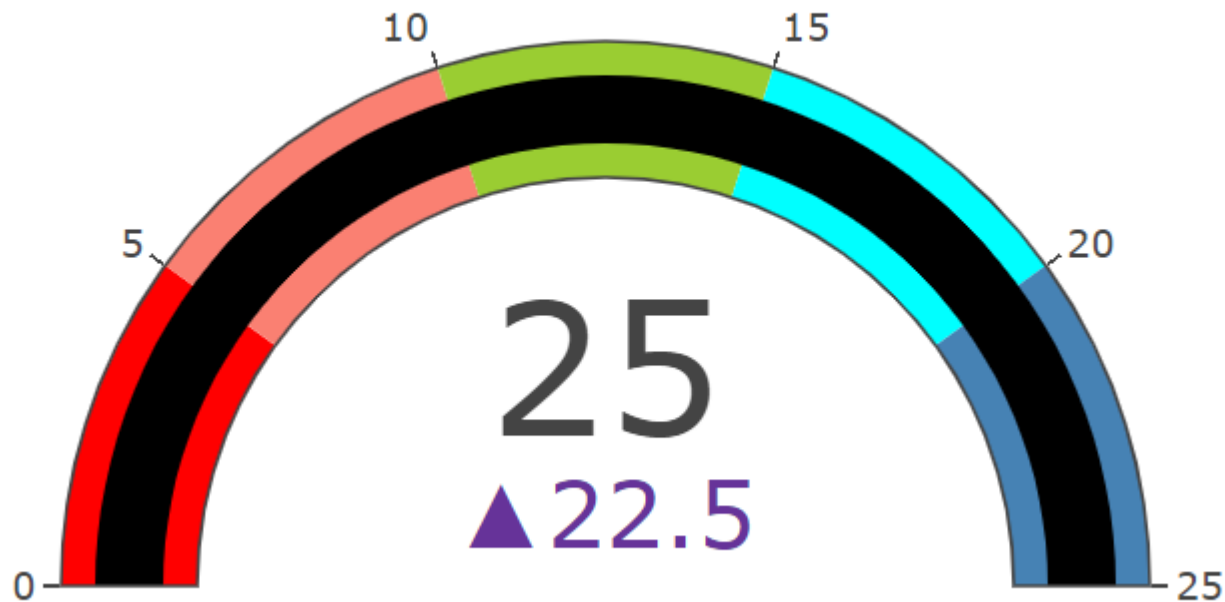

Filter the data using that consultant name, and create lists of unique parts, chapters, etc. using `if(list.includes(item))` statements

Print data to the info box by iterating through those lists

3 Reference Dashboard

Displaying gauge info using dropdown menu

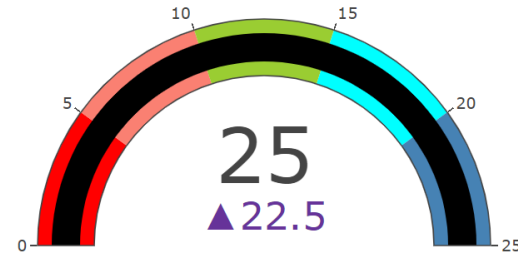

Number of References of Institution vs Mean

5 Reference Dashboard

Overview of Steps

Number of References of Institution vs Mean

Import data from JSON file into app.js using `d3.json().then`

Collect the consultant name selection using `element.property('value')`

Filter the data using that consultant name, and collect the number of times that consultant name was referenced

Feed that reference count amount into plotly using mode: 'gauge+number+delta'
